Guitar TRUMON

MAKE A SURPRISE

"When i realized that a guitar that both meets performance needs and satisfies aesthetic tastes is usually very expensive, while affordable ones tend to be generic and unremarkable, i designed one according to my vision of a perfect guitar and named it 'trumon'."

—

Founder Of Trumon: Mr. Huang Yongjin

BRAND EVENTS

2013 - 2014

The Trumon brand was registered and established in Guangdong. In the early stage, it mainly focused on domestic distribution and achieved rapid development. By the end of 2013, its business had gradually taken shape.

Trumon's offline sales channels began to emerge, and the launched laminate guitar series became popular across the country.

2015

March: Trumon officially initiated the positioning transformation for solid-top guitars and started the R&D of its first-generation products.
October: after nearly half a year of sampling and optimization, Trumon's iconic inlaid soundhole rosette and five-piece neck were finalized, and the first-generation Trumon guitars took initial shape.

2016

June:the third version of Trumon's logo was successfully designed, which is the version closest to the current one in use.
September: the first-generation Trumon products were successfully mass-produced and launched, marking Trumon's official entry into the solid-top guitar market.
October: Trumon showcased its first-generation product series, including the 25, 50, 68, and 1852 models, at the Shanghai Music Show. These products stunned the audience, popularized the use of Santos Rosewood in China, and triggered a major transformation in the domestic guitar industry. Since then, China's guitar industry has entered an era of diversification.

2017 - 2018 - 2019

July: Trumon's 850SFT vibration-enhanced guitar gained nationwide popularity, promoting the widespread application of vibration-enhanced technology in China.
In the same month, Trumon's classic all-solid guitar "Summer Solstice 1980" was launched.

May: Trumon's national star-level dealer network was fully launched.
August: Trumon signed contracts with world-class musicians, including Kevin Blake Goodwin, Ali Deniz Kardelen, Kris Schulz, Jamie Dupuis, and Don Alder.
December: Trumon's Dongguan Guitar Factory was officially completed.

March: Trumon's Dongguan Factory officially started production, and the R&D of Trumon's 2.0 product system was fully initiated.
May: Trumon established an acoustic R&D team with luthiers as the core.

2020

April: Trumon's best-selling all-solid guitar "Dolphin Story" was launched. It sold out immediately upon release, received widespread attention and praise, and remained in short supply for a long time.
November: Trumon successfully developed the TF body shape, and since then, Trumon has had its own acoustic body shape system.
December: the TFL (Trumon Florence) body shape was successfully developed. Based on the classic Jumbo body shape, the TFL body shape has undergone innovative verification and is known as the "Florence Cutaway Body Shape".

2021 - 2022

April, Trumon's 2.0 product matrix was officially launched. Its tone was widely praised, and Trumon successfully entered the ranks of China's first-tier guitar brands.
December: a representative luthier from Trumon won the gold medal in the Folk Guitar Category of the 2nd China Guitar Making Competition.

June: Trumon's new modern factory settled in Hunan, and the preparation for China's top-tier automated production lines was officially initiated.

2023

April: Trumon's latest generation of products was launched. The 850SFT was officially upgraded to the "Black Feather" series, and the basic product system of Trumon was established.
May: Trumon's first dealer conference was held, and its service outlets covering all provinces across the country were officially established.
June: Trumon entered the markets of Russia, Mexico, and Australia, officially stepping into the global market.
In November, Trumon's Dolphin Story 1955TFL became a nationwide hit, and this phenomenon was known in the market as "Hard to Get a Dolphin Guitar".

2024

January: Trumon made an appearance at the NAMM Show in the United States, creating a sensation and winning wide attention and praise from international guitar enthusiasts. In the same month, Trumon's founder visited well-known American handcrafted workshops such as Santa Cruz and Jeff for learning and exchange, and later in the month, visited and exchanged ideas with factories of internationally renowned brands such as Martin, Taylor, and D'Addario.
March: Trumon officially signed a contract with Josephine Alexandra, an Indonesian young musician and composer, as its endorser for the Asian region.
June: after two full years of effort, Trumon's modern factory in Hunan was fully completed, marking Trumon's official entry into the ranks of international first-tier guitar brands.

2025

January: Returning to the NAMM Show, Trumon captured the spotlight, earning widespread acclaim from the global guitar community and industry insiders for our uncompromising craftsmanship.
May: The highly anticipated Trumon 280 Series made its debut, setting a bold new standard for flagship solid-top acoustics.
June: Within just one month of its release, the Trumon 280 went viral, breaking records to become a phenomenal sensation in its class and cementing its status as an instant classic.
September: The Wing Series received a major upgrade, featuring an all-new, versatile resonance pickup system designed to unleash ultimate playing freedom.
October: Trumon showcased its next-generation product lineup at Music China (Shanghai), kicking off the "Trumon Fan Festival" to overwhelming crowd response. Simultaneously, we officially unveiled two of our proprietary pickup systems.

2026

January: Marking its third appearance at the NAMM Show, Trumon delivered the "Sound of Defiance"—relying on sheer performance to break through industry stagnation and lead the market forward.
April: The Trumon Wing Series took center stage at the Wuyu Youth Band Competition, empowering the next generation of indie artists and original music.
June: The Summer Solstice Series underwent a complete evolution. Delivering our signature "Ideal Sound," it once again set the gold standard for acoustic excellence.

2013

The Trumon brand was established in Guang dong in 2013 and has been in existence for more than a decade

ABOUT TRUMON

Trumon is a high-end acoustic guitar brand integrating R&D, production, and sales. It continuously innovates guitar craftsmanship through in-depth research, enabling musicians to surpass themselves and enjoy the joy brought by music.

"Make a surprise" – creating surprises for musicians and crafting music with passion, and producing high-end musical instruments accessible to the general public has always been the belief that Trumon has adhered to since its establishment. In Trumon's world, music is priceless, but high-quality music experiences should be accessible to everyone. It is through its own efforts and persistence that Trumon has turned this belief into a reality.

Trumon's New Factory

The factory covers a production area of 13,208 square meters and is fully equipped with a point-to-point central dust collection system extending to every workstation. This system can minimize various types of dust generated during the guitar production process, reduce the impact on the working environment and product craftsmanship details, and ensure that guitars are manufactured in a more stable environment to meet more refined craftsmanship standards.

HF-V Wood Vacuum Dryer

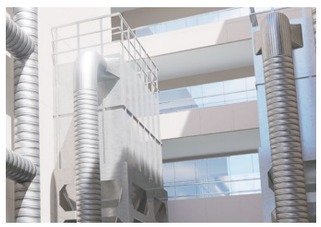

The HF-V High-Frequency Vacuum Wood Treatment Chamber is the final checkpoint for ensuring the stability of wood materials before guitar production. It integrates various instruments and processes such as a high-frequency generator, a vacuum negative pressure system, and a steam cooler. Instead of simple high-temperature drying, it performs multiple rounds of technical treatment on wood that has already undergone natural air-drying releasing internal stress, conducting further treatment, and releasing stress again. This repeated process thoroughly unlocks the potential of the wood and lays a foundation for higher stability.

Constant Temperature And Humidity Control System

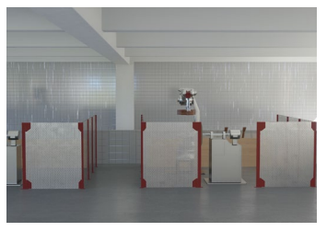

Through physical isolation, equipment dehumidification, air supply, and humidification systems, the environment for wood processing is maintained at an optimal humidity level of 40-60%. Targeted and precise temperature and humidity control are implemented in different production processes to make the internal stress of the guitar more stable and comprehensively improve the stability of the guitar.

Central Dust Collection System For The Entire Factory

The central dust suction pipeline covers all woodworking processes, absorbing over 90% of the wood chips and flying dust generated during production. This greatly improves the working environment and also facilitates the smooth implementation of processes that have extremely high environmental requirements.

Water Circulation Purification And Dust Removal System

Through multi-stage dust removal measures such as water curtain channels and water circulation purification systems, fine dust and sticky dust generated during paint sanding and polishing processes are absorbed, ensuring a dust-free environment in the spraying workshop to the greatest extent and comprehensively upgrading the spraying quality.

SCNC

The SCNC Machining Center is equipped with CNC machines capable of performing various processes including cutting, planing, chiseling, milling, grinding, and carving. All these machines adopt digital precision control to ensure accurate data and craftsmanship details for each process. Only through standardized control of every detail can a stable and outstanding tone be achieved. Up to now, more than 95% of Trumon's production processes have achieved more precise production craftsmanship.

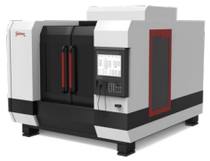

Neck Multi-Axis Machining Center

Soundboard Machining Center

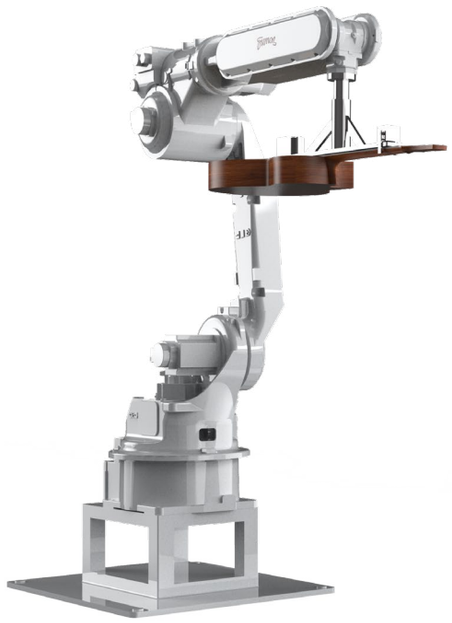

Frame Grinding and Precision Milling CNC Table

Bridge Precision Milling Machine

Inlaid Soundhole Rosette Precision Carving Machine

DMAA Digital Robot Arm

The 5th-generation polishing robot arm is equipped with a pressure sensing system, which can control the precision of guitar paint polishing to the level of 0.1 mm and adaptively adjust to the wear degree of the polishing cloth wheel. This solves the problems of paint penetration, uneven polishing, and uneven paint film thickness. Ultimately, it brings Trumon guitars a more uniform and thinner paint film, as well as a more transparent and clean paint finish effect.

Creating Surprises For Musicians,
Crafting Music With Passion

“Make A Surprise”

We have always insisted on focusing on the field of acoustic wooden guitars. With more pleasant tones, more exquisite craftsmanship, and more detailed designs, we explore more possibilities of acoustic guitars. For Trumon, the core of surprise stems from passion. Creating an acoustic guitar that "understands music and expression" for every player who harbors a "music dream" is the precious surprise that can truly touch the heartstrings.

Let passion take root, and let melodies bloom like flowers. May every Trumon guitar resonate with players and become a carrier of inspiration for pursuing dreams; may every strum become a surprising moment of unexpected encounter with beauty.

TSmini

Beyond Where Your Heart Leads

The farther we travel, the more we want to take a guitar with us, so that we won't be left empty-handed and regretful when inspiration strikes.

The TSmini is a 36-inch solid-top guitar that is very easy to carry. It can accompany you at every moment during your journey. The advantages of the small body shape go beyond portability: its shape fits naturally in the hands, allowing fingers to move more freely. Combined with the TSmini body shape and the configuration of spruce and mahogany, it balances tone and size perfectly. The TSmini has a clear and warm tone, like the morning sun – cheerful, pleasant, and full of the expectation of new life.

We know that you will travel to many distant places – into books, into your bedroom, onto the streets, into crowds, into fields, and into forests. Whenever your heart is touched, we hope the TSmini will always be by your side, allowing you to enjoy the fun of the journey.

Solid-top Guitars

150 Series

150 SERIES

The Pinnacle of Entry-level
Solid-top Guitars

The 150 Series is Trumon's basic series. Just like the process of starting from 0 to 1 in anything, it represents a beginning and an attitude. Life is like walking through a maze – after exploring the unknown, we may stop in our tracks, going around in circles and unable to get out. However, the world is vast, and many beautiful stories only need a start; what follows may be surprisingly simple.

As Trumon's entry-level solid-top product, the 150 Series selects high-quality Sitka Spruce tops, which offer an extremely wide range of sound performance. It adopts an upgraded high-gloss multi-layer thin-coat finish technology, which enhances visual appeal while preserving the original tone of the wood. Combined with D'Addario XS Coated Phosphor Bronze Strings, it provides a smooth string-plucking experience. The lower string action also stimulates more interest in practice among beginners, allowing them to bravely embark on this wonderful musical journey and enjoy the joy brought by music.

A beautiful story always consists of a brave attempt and a wonderful follow-up.

Wings Of Freedom

The King of Cost-Effective Solid Top Guitars

280 SERIES

The King of Cost-Effective Solid Top Guitars

During your musical exploration journey, you may hear many voices – some say your melodies are too avant-garde, others complain that your rhythm is not pleasing enough. Perhaps these voices will make you lose your way temporarily, trapping you in the fog of self-doubt. However, as long as you can pluck the guitar strings, immerse yourself in music, and enjoy it, its pure power will lift your soul forward – just like the inlaid "Wings of Freedom", which gradually spread its wings and soar in the boundless world of music. Music defines who you are, and choice is freedom!

The 280 Series is a testament to Trumon's commitment to going further and deeper in the field of acoustic wooden guitars. While smart guitars and new material guitars are in full swing, Trumon continues to explore new possibilities of acoustic wooden guitars. It selects high-quality Sitka Spruce tops and double-sided Indian Rosewood back & sides, paired with a high-gloss finish, presenting a traditional American classic design. The wide sound range and strong explosive power of Sitka Spruce, combined with the rich bass and full tone of Rosewood, provide more possibilities for playing styles. Whether you are a beginner or an advanced player, you can quickly get started and fully experience the charm of music.

Adhere to the authenticity of pure music.

Your Stage Wherever

How to create a guitar that is born for the stage has always been a question we have been always thinking about it. Musicians with passionate dreams hold concerts in their bedrooms, host music festivals in park corners, and treat every performance as a stage show – just like black wing under the spotlight, attracting people's attention, and as comfortable and free as Wings falling.

The all-scene vibration-enhanced series represented by Black Wing is specially designed for the "stage". It is newly equipped with the TSFT-5 new vibration-enhanced pickup system co-developed with Double Acoustics Company. Not only does it add a Bluetooth function, turning the guitar into a speaker in seconds and making practice as simple and interesting as listening to music, but it also features an OTG port for internal recording expansion. No sound card conversion is needed – just connect to a device to achieve Hi-Fi level sound quality and preserve the pure tone of inspiration with one click. It is also equipped with a single-effect pedal worth thousands of CNY , which allows independent adjustment of both percussive and fingerstyle sounds, and perfectly solves the feedback problem on stage. After the new adaptation and compatibility testing by Trumon's acoustic team, the Black Wing, with built-in reverb and tone adjustment, enables musicians to enjoy a new experience of "connect and play, play and record instantly", turning every scene into their own exclusive stage.

TRUMON WING SERIES

wing series

Trumon's Cutting-Edge Tech, Built for Superior Playability

The newly launched all-solid Black Wing model 950M.A.G integrates the TFL cutaway body shape design with the exquisite integrated soundhole rosette element for the first time. It not only has visual beauty and unique recognition but also demonstrates Trumon's modern aesthetic design concept. At the same time, it is equipped with the TSFT-7 new vibration-enhanced pickup system co-developed with Double Acoustics Company–a three-pickup system integrating pressure sensing, coil, and microphone, which can transmit the original sound of the guitar with nearly 1:1 restoration. The independent magnetic pickup unit at the end of the fingerboard can pick up and feedback sounds more sensitively and quickly. While restoring the guitar's tone, it adds a sense of space and dynamics to the guitar's sound, allowing musicians to freely interpret every detail of their playing!

All stories that keep you up all night, all the anxiety, trembling, depression, and excitement – they will all be released at this moment.

Now, pick it up and play your melody to the world.

A hub of innovative technologies no speaker plug-in required

Sakura Series

We Will Meet Eventually

Twisting, winding, sometimes returning to the original state, and reconnecting again – this is a knot, and this is also us.

The Sakura Series is Trumon's hand-rubbed color series, available in three colors: Cherry Blossom Pink, Deep Sea Blue, and Natural Color. The top is made of solid German Spruce, which offers a very full tone. After a thorough break-in period, it can bring a pleasant surprise in terms of sound. The natural grain of the Figured Maple used for the back & sides is unique and distinctive, creating an orderly visual contrast between light and dark, like delicate shadows, giving the guitar an outstanding overall temperament. Therefore, every Sakura is unique and belongs only to you.

The moment when a thought arises is always accidental and coincidental.

A Symbol of Freedom and Spirituality
One Dolphin Series Guitar Is All You Need to Create

Dolphin Series

One dolphin guitar is all you need to create

Moving works often originate from real stories and emotions. Driven by such feelings, the sound becomes vivid and lively – just like dolphins in the sea, full of a sense of freedom and spirituality. We have always hoped that our guitars can resonate with such sounds, telling stories of hometowns amid the hustle and bustle of life, singing about the life experiences of strangers we pass by, and voicing for the past, the future, the present, and all things worthy of leaving a trace.

The Dolphin Story retains the Florentine beauty of the previous generation's TFL cutaway body shape and has more distinct features and adjustments in terms of acoustics. The low frequency shows a more explosive vibration response, while the mid and high frequencies are mellow, full, clear, and bright. The dolphin pattern carved on the fingerboard is still eye-catching, and the fret markers at all levels are designed as bubbles blown by dolphins, making the overall design lively and free. The configuration of solid African Mahogany back & sides endows the Dolphin Story with classic basic tone characteristics, making it suitable for musicians with a wide range of styles and any type of music they like.

Dolphin Story is dedicated to all such musicians.

Summer Solstice

Everyone has an unforgettable summer in their life. In those sunny days, it seems that all the romance and sentiments of life are hidden.

The Summer Solstice Series still retains a classic touch and combines with Trumon's unique TFL cutaway body shape, endowing the Summer Solstice with an inherent temperament. The carefully selected solid Sitka Spruce top has a sensitive dynamic audio response. Paired with the East Indian Rosewood back & sides, which have a rich low frequency and warm tone, the resonance of these two high-quality wood materials collides – the catchy sound will be deeply engraved in your mind, just like the Summer Solstice in your memory, which you are reluctant to let fade away, and the midsummer in your memory emerges once again.

Summer captured in wood and strings

Commemoration Is Both Worthwhile And Necessary

Santos Rosewood is a well-known precious wood, produced in South America. It is extremely scarce and valuable. Compared with Brazilian Rosewood and Indian Rosewood, it has higher hardness and density, making it more difficult to process and craft with precision. However, the sense of accomplishment obtained after overcoming great difficulties also increases accordingly. That feeling always makes us immersed in nostalgia and also gives us the courage to climb higher mountains – and Santos is such a guitar.

The sound characteristic of Santos is based on a broad sound range orientation. It has richer overtones and more prominent sound layers, just like the echoes from distant mountains again and again – gentle, powerful, and full of texture. The wonderful combination of German Spruce and Santos Rosewood, coupled with the careful adjustment of luthiers, endows the entire guitar with both strong explosive power and controllability in sound.

Every progress deserves to be celebrated, and every transcendence deserves to be remembered.

Creeper

Unceasingly Moving Upward

Trees grow taller to absorb more sunlight, and large leaves are for maximizing sunlight absorption. However, the creeper is a very special plant – it has no tall and strong branches, nor large leaves. To absorb sunlight, it can only move upward, constantly upward – just like many partners who struggle hard on their musical journey. Although the road ahead is unknown, they are still willing to take their passion as motivation and are determined to spread their voices to more people's hearts.

They are like the unceasingly upward creepers.

The Creeper uses rare imported figured koa wood, combined with the TFL body shape and integrated with CUSTOM elements, creating an extremely rare all-solid guitar. The carefully selected figured koa wood has a clear grain and great aesthetic appeal. In terms of sound, it is extremely sweet – the high notes are clear but not sharp, the mid notes are solid and powerful, warm and full. In terms of product design, a new bracing structure is adopted, which is adjusted and cut according to the characteristics of koa wood. This allows musicians to focus more on music and immerse themselves in performances when playing the Creeper. In addition, the rosewood binding chamfering process and armrest greatly enhance the musician's playing experience.

On the guitar's fingerboard, a creeper climbs upward from the bottom of the fingerboard, along the edge, across each fret, and towards the sun.

Configuration Details

All Solid Guitar
Solid Sinker Redwood
&
Solid Madagascar Rosewood

Limited To 10 Pieces

The 10th anniversary limited edition guitar is a rare custom product of trumon, with a global limited release of 10 pieces. Each guitar has a limited-edition number mark (01-10) carved on the bridge. The ebony fingerboard is inlaid with the chinese zodiac signs representing the 10th anniversary of trumon's establishment (from the year of the snake to the year of the rabbit), symbolizing the special commemorative value of trumon's 10th anniversary. There is also a 10th anniversary commemorative stamp of trumon at the bottom right corner of the fingerboard. Therefore, each 10th anniversary limited edition guitar is unique.

Rare Sinker Redwood

The top of the guitar is made of extremely rare solid sinker redwood. Sinker wood is very rare and can only be formed after being soaked in seawater for a long time by chance, so it also has special commemorative significance.

The sinker redwood, which was buried underwater and experienced a long period of time, not only inherits the warm and romantic tone of redwood but also has a smooth and jade-like diffused tone after being soaked by time and water. Combined with the calmness of madagascar rosewood, it is very suitable for light yet powerful performances. When playing, it is like time flowing slowly, telling stories gently. The sensitive sound transmission brings you a wonderful auditory feast.

TRUMON CULTURAL MERCHANDISE

WINGS OF FREEDOM T-SHIRT

The soft cotton fits the body, just like the embrace between music and the soul.
"Wings Of Freedom" is not only a cry for freedom but also a manifestation of self-choice.

REVERSIBLE BUCKET HAT

When the breeze blows, put on this simple bucket hat, carry a Trumon guitar, and wander on the street – starting a pleasant encounter with music.

WOODEN PICK NECK-LACE

A guitar pick carved from warm wood is strung into a necklace and gently attached to the chest. Whenever your eyes fall on it, the sound of a Trumon guitar seems to echo in your ears.

GUITAR PICK NECKLACE

The hollow-connected wings on the guitar pick are like a link between freedom and music. The coldness of the metal is dispelled by passion. With it, you can touch it anytime you raise your hand and feel the freedom.

FRIDGE MAGNET

A fridge magnet, a slice of summer solstice—keeping your musical memories in sight.

DOLPHIN KEYCHAIN

The fluid silhouette of the dolphin mirrors a pure passion, capturing a sincere heart. Carrying on the free-spirited essence of the Dolphin, let romance and devotion stay by your side.

TRUMON HIGH STOOL

As a ray of morning light shines, sit in a comfortable corner, hold a Trumon guitar, and play with the singing of birds outside the window, fully immersing yourself in the purest music.

WINGS OF FREEDOM NECKLACE (Commemorative Edition)

Wings forged from metal are worn around the neck, strong and tough. The double chain is the connection between music and freedom, allowing you to soar with passion in the name of freedom.

WINGS OF FREEDOM RING

The twisted wings wrap around the fingertip, also embracing music and dreams. The metallic luster shines quietly. Every time you wear it, you place that freedom and passion in your heart, letting them ferment silently.

TRUMON HARDSHELL JACKET

When wind and rain are approaching, the sense of security brought by being tightly wrapped allows you to play your beloved Trumon guitar freely outdoors regardless of the weather, letting the power of music break through the barriers of wind and rain.

CHINESE TRUMON NECKLACE

A medal condensed with ingenuity, witnessing Trumon's enthusiasm and persistence in the world of music. It carries the original aspiration of moving towards the top of the industry.

WARM BROWN GLASS CUP

In the early morning, sip a drink with music, pick up a Trumon guitar along with the rhythm of the melody, and start a comfortable musical day.

TRUMON BLACK MUG

As night falls, let go of the tiredness of the day with the aroma of coffee, and follow the rhythm of music – a slow-paced life is right in front of you.
